

FROZEN WATER PIPE WARNING!!

While air temperatures have increased, the below-surface temperatures continue to drop and drive down the frost line. Prevent your pipes from freezing and bursting -- which can lead to costly damage – **by leaving a faucet running during this stretch of cold weather.** Please consider running water at a constant, light stream 24 hours a day in a utility tub or sink if you ...

- had frozen water services previously
- are away from home for a day or more
- live alone and do not use much water
- own an older home

Incidents are occurring Village-wide in which water is freezing in the service line between the water main at the street and a home or business, or in an exterior wall of a home. Know how to turn your water **OFF** if a pipe bursts, and **NEVER** use open flame to thaw a pipe.

Please call a qualified licensed plumber for further assistance with any plumbing concerns.
